

2024/2025 ESG Report

01 June 2024 - 01 July 2025
Written by ICSS' Sustainability Team

Industria Cartaria Santo Spirito SPA

Message from the Sustainability Manager

ESG values help companies grow ethically, with respect for both the environment and people. At ICSS, we strongly believe in these principles and have made them an integral part of the way we operate, committing every day to improving our products and processes with continuous evolution. Sustainability requires ongoing commitment, not occasional actions.

As illustrated in this report, over the past year we have carried out numerous initiatives, including investments in the **modernization of our cardboard division** and the introduction of internally developed solutions by our team of specialists, such as **new containment tanks to reduce EPS dispersion**. Our actions have been evaluated by several external organizations.

We have also undergone ESG assessments by our key clients, further strengthening our transparency and accountability. **These evaluations are essential, as they provide a clear view of our performance, help identify areas for improvement, and support our efforts to maintain high sustainability standards.**

ICSS is proud to be part of three European projects dedicated to sustainability: **Operation Clean Sweep (OCS)**, **Recotrace**, and **EcoeFISHent**. The first aims to reduce microplastic dispersion, the second focuses on improving recycling traceability, while EcoeFISHent promotes innovative solutions for sustainable fishing in the Genoa area, such as the use of compostable fish boxes.

All of this reflects our commitment to a more sustainable future. For the **fourth consecutive year**, ICSS has been recognized among the **100 most sustainable companies in Italy**.

Matheus Pereira Novello

ICSS

About us

Packaging ensures product integrity and serves as the **business card for your goods**.

For this reason, the ICSS Group is committed to providing **high-performance packaging** that insulates, protects, and preserves your everyday items. Our mission is to ensure that your products reach consumers in perfect condition through our **reliable, sustainable, and high-quality solutions**.

The ICSS Group was **founded in 1969** by Carlo and Adriano Garbagna as a producer of corrugated cardboard packaging. In the 1970s, Expanded Polystyrene (EPS) emerged in the packaging industry, which ICSS quickly adopted and excelled in.

Over the years, ICSS has expanded its operations and now has five divisions in Europe (**Espansi One, Galbox, ICSS, Poliforce, and Poliforce Delta**) and one in Turkey (**Dorabox**). These are strategically located to improve geographic coverage, increase customer satisfaction, and reduce CO2 emissions from transportation.

The market is once again shifting towards paper-based solutions, bringing us back to our roots. This change has driven us to **renew our cardboard division**, improving the efficiency of our product manufacturing. At the same time, we continue to explore plastic alternatives, such as **recycled EPS and PLA**, to offer increasingly sustainable solutions.

Our strength lies in **balancing tradition with sustainable innovation**, ensuring the company's continuity and providing our stakeholders with a reliable, responsible, and forward-looking partner.

About us - Results & Investments

Despite market uncertainties, ICSS has continued to **make strategic investments to prepare the Group for future challenges and improve operational efficiency.**

One of the most significant initiatives is the construction of a **new facility in the industrial zone of Manisa, in southwestern Turkey.**

This location will bring us closer to our key customers in the region, reducing transportation costs and CO2 emissions for our stakeholders, while increasing efficiency through modern facilities designed to handle higher volumes and diverse raw materials.

The new plant, Dorabox, is expected to be completed in the second half of 2025. Once operational, 100% of our independent factories will be powered by sustainable energy sources, further strengthening our commitment to environmental protection.

Investments have also been made in Italy. At ICSS Spa, the construction of new offices was completed in the first half of 2025. The new building ensures greater energy efficiency thanks to a design optimized to maximize solar exposure throughout the day.

For the production department of ICSS Spa, a **new boiler and two burners** have been acquired with the goal of improving gas consumption per kilogram of printed product, one of **our key performance indicators (KPIs).** This measure helps reduce the environmental impact related to methane consumption.

With a continued focus on the environment, we have also **installed containment tanks to limit microplastic dispersion during production processes.** This solution was implemented as part of the Operation Clean Sweep project.

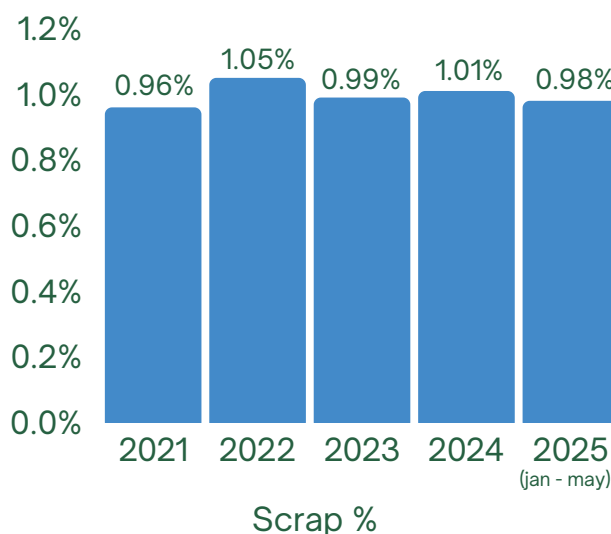

About us - Results & Investments

With the growing demand for cardboard packaging, ICSS has obtained **FSC® certification** for some of its products and completely renovated its cardboard division. These investments have yielded positive results and opened new commercial opportunities.

For expanded raw materials, we have updated the **Plastica Seconda Vita certification**, ensuring a defined percentage of recycled material in some of our products. These certifications have enabled us to achieve a level B score on the **CDP** portal, a global non-profit organization that maintains the richest and most comprehensive database on corporate and state sustainability actions.

Regarding production, our current waste rate remains **very close to optimal levels**, clearly reflecting the efficiency and reliability of our processes. Given the nature of the sector and the high level of control achieved, **it is unlikely that this value can be further reduced**, confirming the strength and consistency of our operational and quality standards.

We are proud of this KPI, which is the result of continuous commitment and a company culture focused on improvement. **Maintaining high standards remains a top priority for us**: it ensures quality, efficiency, and sustainability, giving our customers the confidence to rely on a responsible and dependable partner.

Governance

We consider governance to be one of the key elements of our commitment to **responsible, transparent, and sustainability-oriented management**.

At ICSS, we are aware that solid governance is essential for creating lasting value for all stakeholders — customers, employees, suppliers, and communities. Our actions are based on principles of transparency, integrity, accountability, sustainability, and effective risk management.

Governance represents a fundamental pillar for the success and reputation of ICSS as a sustainable benchmark in the packaging sector. The continuous refinement of our ESG approach stems from the awareness that **strong governance is essential to achieving high levels of performance**.

This translates into the development of periodic plans for targeted investments and improvement goals in environmental, social, and economic areas. A concrete example is our commitment to reducing dependence on fossil energy sources.

Effective governance policies allow us to prevent potential violations or penalties, ensuring that ICSS remains at the forefront in terms of regulatory and ethical compliance.

This commitment reflects our determination to operate responsibly, promoting transparent, honest practices that respect both the environment and society.

As a testament to our credibility in the industry, our CEO **Paolo Garbagna was recently re-elected Vice President of AIPE** (Italian Expanded Polystyrene Association).

Mission

Create confidence and earn market trust daily.

We want to be an added value to our customer's business, not “the packaging supplier”.

Vision

To be the best environmental friendly protective packaging specialist.

"To create change, we must start with ourselves."

Values

Passion

We trust that there is value in all products we put out to the world, and we do all products with a lot of passion.

Commitment to the customer

We only promise what we can keep, we keep everything we promised at any cost.

Sustainability

We direct our choices in order to ensure the containment or reduction of the environmental impact in compliance with current legislation.

Integrity

Transparency and working ethics are our drivers, without it all the other aspects are lost.

Constant Improvement

Trying to be better than yesterday motivates us to push our limits daily. We believe that our best version is the one of tomorrow.

Social

Investing in social factors helps companies build trust and loyalty, leading to greater employee and customer satisfaction as well as stronger community ties.

By fostering a positive work culture, promoting diversity, and ensuring fair labor practices, companies can attract top talent. This, in turn, drives innovation, productivity, and long-term success.

ICSS is actively committed to creating value for society by promoting sustainable and responsible production practices. **We believe that every business decision should contribute to collective well-being, by reducing environmental impact and improving quality of life.** We support educational initiatives, collaborate with universities, and promote local talent by investing in people and the communities in which we operate.

ICSS places great value on its collaboration with the University of Pavia, particularly with the Master's program in International Business & Entrepreneurship (MIBE).

This partnership represents an important opportunity for us to connect with young talent and fresh ideas, while also strengthening our positive impact on the community.

For the third consecutive year, we had the pleasure of welcoming students from the **MIBE** program to our headquarters. The visit was designed to give them a hands-on experience within the Circular Economy course, allowing for direct engagement with real-world business practices.

We are proud to support the academic world and to contribute to the education of future generations of professionals.

Social

It's important to remember that, by their very nature, our products already have a positive impact on people: through our packaging, **we protect and preserve everyday goods, contributing to the safety and integrity of what matters most to our customers.**

This reinforces our commitment to adopting responsible solutions, aligned with our role in supporting people's daily needs and addressing the broader demands of society.

Beyond the impact of our products, as a medium-sized company, **ICSS values diversity within its team**, recognizing that different backgrounds bring varied perspectives to tackling everyday challenges. This diversity enriches our workplace dynamic and helps optimize response times, enhancing both efficiency and innovation.

By the end of 2024, the ICSS Group employed workers from 10 different nationalities of 4 different continents, reflecting an inclusive work environment open to cultural diversity.

10 nationalities among the workers
(Brazilian, Ecuadorian, Hungarian, Iranian, Italian, Moroccan, Nigerian, Senegalese, Tunisian, and Turkish)

Also in 2024, ICSS Spa provided 1,042 hours of training, investing in the skills of its employees.

Training is a key element both to ensure high workplace safety standards and to strengthen the hard skills needed to maintain the quality of production processes. Continuously updating staff knowledge means reducing risks and promoting a responsible corporate culture.

1.042

training hours (ICSS SpA)

Another positive impact that ICSS has on the community is that the Group's CEO, Dr. Garbagna, is a lecturer in circular economy at the University of Pavia. This demonstrates our ongoing commitment and strong connection with our stakeholders, contributing to the dissemination of sustainable knowledge and practices.

Environment & ESG Projects

Climate change is a reality that can no longer be ignored, and **environmental responsibilities** must be embraced not only by governments but also by companies. With this in mind, ICSS is committed to reducing its carbon footprint through investments in various sectors. ICSS also participates in three European programs aimed at achieving a greener economy and adding value to its goods and services.

As in previous years, ICSS continues to actively participate in three major European sustainability projects. **Recotrace™** is the leading European portal for tracking and reporting the use of recycled materials, contributing to transparency and accountability in the sector.

Operation Clean Sweep® is an initiative aimed at preventing the release of microplastics into the environment through the creation of targeted and responsible action plans.

Finally, **EcoeFISHent** is a project that promotes circular economy models in the port activities of Genoa, Italy.

In this context, we supply fish boxes made from PLA (polylactic acid), a bioplastic derived from plant sugars and compostable.

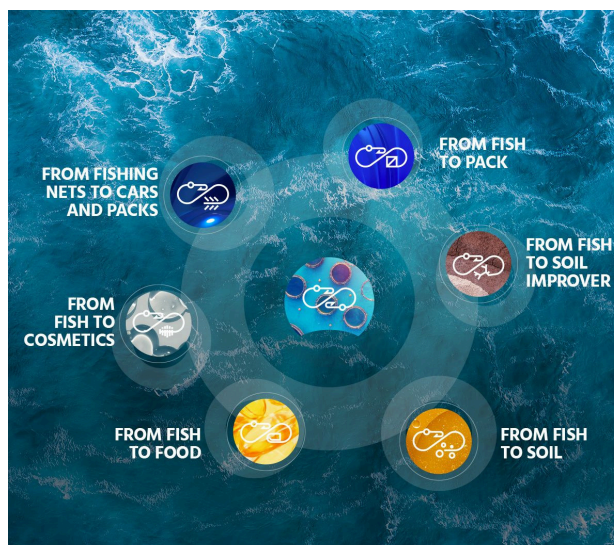

Participating in three European projects allows us to rapidly expand our expertise and **access strategic funding to develop tomorrow's solutions today**. This approach enables us to tangibly improve our environmental performance, benefiting from ongoing collaboration with international partners and institutions. The results of these initiatives are reflected in concrete actions, which will be detailed in the next section of the report.

EcoeFISHent

EcoeFISHent aims to achieve a **climate-neutral circular economy** in the fishing sector of Genova (Italy), enabling **sustainable and efficient** processing to obtain added value bioactive elements for the creation of dietary supplements and skincare products, as well as biodegradable and compostable **food packaging**.

ICSS's role within the EcoeFISHent project is to **produce and distribute the sustainable insulated packaging dedicated to the fish market, known as the "eco-fish box."**

In line with our vision to always provide the industry's best sustainable protective packaging, we are committed in **ensuring the satisfaction of sustainability and quality criteria** expected for a project of this magnitude.

The project has a **total budget of €18.5 million**, of which €15.1 million is funded by the **European Union**. The project duration is expected to run from October 1, 2021, to September 30, 2026.

Furthermore, the consortium involved in the project consists of 34 entities from 7 countries.

Official communication channel (Twitter): @ecoefishent

Official website:

<https://ecoefishent.eu/>

European Commission project link: <https://cordis.europa.eu/project/id/101036428>

EcoeFISHent

ICSS is working to meet the deadlines and milestones of the project by producing samples of the “eco-fish boxes.” These boxes feature an optimized design that allows **up to 30% space savings during transport from our facilities to the ports**. Made from PLA (polylactic acid), they are also industrially compostable when mixed with organic waste, under specific temperature and humidity conditions.

Over the past few months, ICSS has finalized the design of these eco-boxes in collaboration with representatives of the fishermen.

Following investments in the PLA-dedicated production line, ICSS is committed to delivering 10,000 eco-boxes by the project's completion in September 2026. To this end, the upgrade of our production line is underway together with Dutch partners who are experts in PLA molding technology.

Below is an image from the latest General Assembly meeting held in Valencia, Spain.

RecoTrace™

RecoTrace™ is the first comprehensive data system for monitoring both plastic recycling volumes and the use of recycled plastic across all major polymers. It provides a free online platform to track progress against individual commitments to produce or use recycled content.

Through RecoTrace™, PolyREC®—the data collector of the Circular Plastics Alliance—monitors the progress of the European plastics value chain toward the CPA's goal of using 10 million tonnes of recycled plastic by 2025.

As a converter, **ICSS has been submitting its declaration since 2021.** Below is a screenshot of the company's data.

Manage submitted data

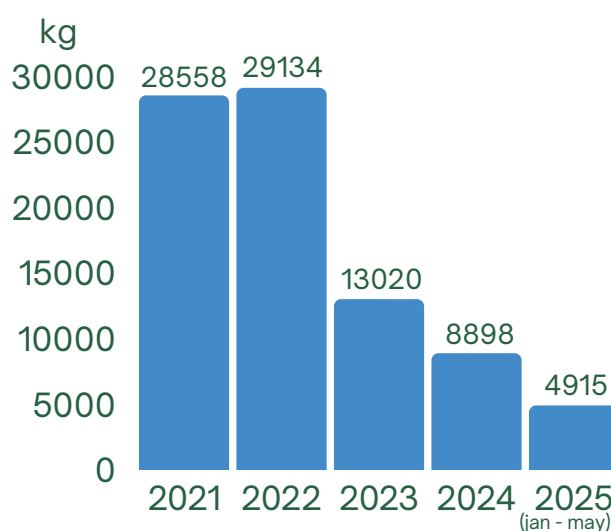

Recycling Input Recycling Output **Converting Input** Converting Output

From: 12/2023 To: 03/2024 Company: ICSS

Polymer: All items are selected. Status: ALL STATUSES

Submission number ^	Reception date ^	Polymer	Waste type	Recycled plastic from	Total	Status	Actions
2/2024	Feb 2024	EPS	None		1290	PENDING	View submission Edit Remove
1/2024	Jan 2024	EPS	None		670	PENDING	View submission Edit Remove

The graphic below shows the recycled content converted into new materials over the past five years at the ICSS facility in Gropello Cairoli (Italy), as reported on the portal.

The total amount of recycled material added to our products is closely linked to those containing the PSV certification (see previous page), primarily intended for civil construction purposes. **It is important to note that internal reuse of raw material is not considered recycled content—material must originate from an external source.** In other words, our in-house recycling is not included in the calculations for RecoTrace™.

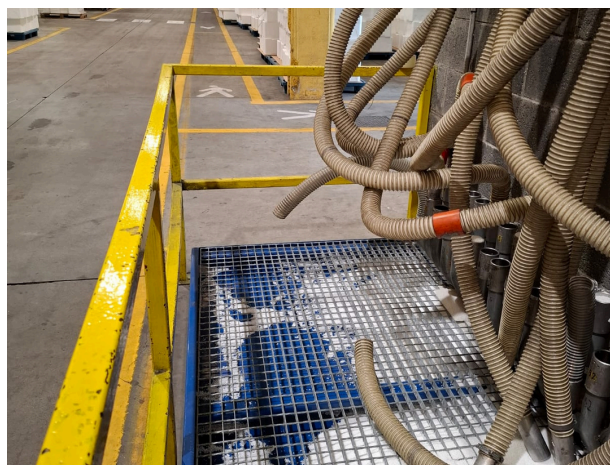

Operation Clean Sweep® (OCS)

Operation Clean Sweep® (OCS) is an international program **designed to prevent the loss of plastic pellets during handling by various entities along the plastic value chain and their dispersion into the environment.** The program's methodology has already helped implement effective corrective actions in many plastic-related companies worldwide.

OCS supports companies in their efforts **to eliminate or reduce plastic loss during operations**, in order to preserve water quality, protect the environment, and enhance worker safety. Our commitment extends to monitoring and eliminating losses throughout the entire production cycle.

ICSS proudly stands out among more than 3,100 companies as a signatory of the initiative featured on www.opcleansweep.eu/.

Participating in this program demonstrates ICSS's commitment to the environment and reinforces our credibility as a trusted partner within any supply chain.

In the photo above, one of the containment tanks installed to prevent the dispersion of expandable EPS (Expanded Polystyrene) beads.

ESG Performance

Carefully monitoring our environmental indicators allows us not only to reduce waste, consumption, and emissions, but also to identify areas for improvement and define more responsible strategies.

This approach helps us ensure operational efficiency, strengthen regulatory compliance, and build stakeholder trust—reinforcing our commitment to sustainable growth.

ICSS's environmental performance monitoring journey began in **2013**, when we started tracking key indicators such as scrap rate, electricity consumption per kilogram of finished product (kWh/kg), and methane gas usage per kilogram produced (mc/kg).

Since 2021, with our participation in various European projects (as outlined in the previous section of the report), **we have expanded the set of environmental data we monitor**. This effort aims to enhance transparency and gain a clearer understanding of our strengths and areas for improvement.

Although not legally required to prepare a sustainability report, ICSS has voluntarily chosen to adopt more advanced practices **by beginning to calculate its CO₂ emissions**. We initially focused on Scope 1 and 2 emissions and later extended our reporting to include Scope 3, demonstrating an increasingly concrete commitment to assessing our overall environmental impact.

In this section, we will analyze the results achieved, understand their underlying causes, and define the next steps to continue improving our environmental performance.

ESG Performance

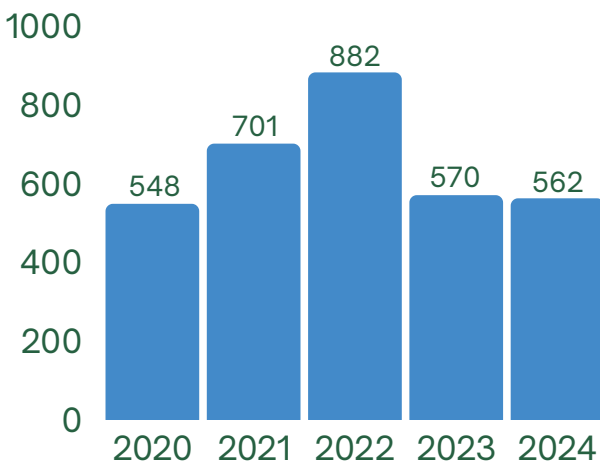

With the installation of photovoltaic panels, ICSS Spa currently covers 13% of its energy needs with clean energy. At **Poliforce**, **40.78% of the energy consumed over the past 12 months has been supplied by the panels.**

40.78%

of clean energy (Poliforce)

As shown in the graph below, there is a clear **reduction in CO₂ emissions (tons) related to electricity consumption (Scope 2) at ICSS Spa**. It is important to highlight that these values are directly influenced by production volumes: in years with higher production, emissions increase proportionally.

CO₂ (tons)

On the methane gas consumption front, the installation of the new boiler and high-efficiency burners (see page

6 of the report) has led to an 11.31% reduction in methane usage per kilogram of finished product (mc/kg) when comparing months with the same production volume, confirming the effectiveness of our sustainable investments.

11.31%

reduction in gas consumption (ICSS)

Currently, the data collected on Scope 1 and Scope 3 emissions are not yet sufficient for meaningful comparisons. In 2023, ICSS Spa recorded 3,050 tonnes of CO₂ emissions for **Scope 1** (direct emissions) and 10,590 tonnes for **Scope 3** (indirect emissions). Calculations for 2024 are currently underway. For this reason, one of the main objectives for the coming year will be strengthening the systematic collection of environmental data.

The goal is to **build a solid information base that will allow, in the coming years, more precise monitoring of emissions, identification of significant trends, and pinpointing areas for improvement**. Only with reliable historical data will it be possible to outline comparable scenarios and gain a deeper understanding of the company's evolving environmental impact.

Awards & certifications

Awards and certifications allow us to objectively validate our commitment to sustainability, by having an external entity evaluate our plans and actions regarding all ESG aspects.

They are essential tools for staying on course and continuing to improve with transparency, confidence, and responsibility.

These recognitions enable us to compare our practices with industry standards and assess our progress over time.

Pursuing sustainability is a long, complex, and ever-evolving journey, where priorities can easily be misdirected or overshadowed by immediate demands. In this context, the actions we take—along with our participation in European projects, attainment of recognized certifications, and awards received—serve as essential tools to measure our progress.

These elements provide us with concrete and authoritative feedback, helping us understand whether we are truly heading in the right direction toward a more responsible and sustainable future.

For the fourth consecutive year, ICSS Spa has been recognized **among the 100 most sustainably developing companies in Italy by Kon Group and Forbes Italia**. Additionally, for the second consecutive year, we have received an official rating through **CDP**, the leading global platform for environmental data disclosure. We have also obtained **FSC®** certification for some of our products, ensuring their traceability and origin from responsibly managed sources. Finally, we renewed our **Plastica Seconda Vita®** certification, reaffirming our commitment to using recycled materials and promoting a more circular economy.

Sustainability Award Top 100

As in previous editions, the Sustainability Award, promoted by the Kon Group, aims to **highlight the efforts of companies that have successfully integrated environmental, social, and economic sustainability into their strategies** through the standardization of innovation principles and performance monitoring.

The selection criteria for companies are based on the three pillars of the ESG system: environmental, social, and corporate governance, to support better integration of these aspects and ensure sustainable growth in every sense.

The research is conducted by **ALTIS**, which has developed an evaluation system that considers objective, measurable, and easily comparable parameters.

It has been a **great honor to be recognized in all four editions**, confirming that we are on the right path to reducing our environmental impact through the use of alternative energy sources, eco-design of packaging, and promoting our values among all our stakeholders.

Promoting a stronger culture of sustainability within the business

system, along with increasing awareness and visibility of our group of companies, motivates us to keep pushing toward a greener future.

Full report at the link below:
<https://forbes.it/2024/11/05/sustainability-award-2024-il-resoconto-della-quarta-edizione-del-premio-ideato-da-kon-group>

CDP (Carbon Disclosure Project)

The **CDP (Carbon Disclosure Project) portal** is one of the most influential global platforms for disclosing environmental performance by companies, cities, and governments. It is an independent nonprofit organization that collects, analyzes, and publishes data on climate, water resources, and deforestation, with the aim of promoting transparency, comparison, and concrete action against climate change.

CDP collaborates with over 740 institutional investors and bases its assessments on a rigorous framework aligned with the goals of the Paris Agreement (2015) and the principles of the Task Force on Climate-related Financial Disclosures (TCFD).

For ICSS, reporting our environmental performance on the CDP portal represents a strategic and highly responsible step. For two years, we have actively participated in this process, recognizing the importance of transparent and verifiable communication about our progress in climate and environmental matters. Thanks to our commitment and the continuous improvement of our business practices, over the past year we have achieved **significant advancement, reaching level B in the CDP ranking.**

B
Score

(Industry's average: C)

This result places us above the average of our sector (Score C) and represents a tangible confirmation of the effectiveness of our sustainability strategies.

Our participation in the CDP reflects a clear corporate vision: to build a development model that combines industrial growth, climate responsibility, transparency, and sustainable innovation.

We will continue working to improve our results, with the awareness that environmental reporting is a key tool to drive change and make our future more resilient.

The **FSC® (Forest Stewardship Council®) certification** is one of the most authoritative international recognitions for responsible forest management and traceability of derived materials. Obtaining this certification means ensuring that the wood and paper used in certified products come from a certified supply chain, adhering to strict environmental, social, and economic criteria. This helps protect biodiversity, the rights of workers and local communities, while promoting the responsible use of natural resources.

**The mark of
responsible forestry**

The choice to work with certified materials is not just a matter of compliance, but part of a broader vision: building a business model oriented towards the future.

The link below leads to ICSS's certification on the official FSC® website, as shown in the image.

<https://search.fsc.org/it/?search=I.C.S.S.&page=1>

Plastica Seconda Vita® (PSV)

The "Plastica Seconda Vita" (PSV) label is an ecological certification for materials and products made from recycled plastic, recognized throughout Europe. **The PSV certification plays a crucial role in promoting and communicating the recycled content of products, highlighting the significant potential of plastics in achieving a circular economy in Europe.**

In short, PSV is based on guarantees provided by the technical standards UNI UNIPLAST 10667 and EN 15343, as well as third-party audits carried out by accredited certification bodies. It applies the concept of **"traceability"** of recycled materials and calculates their content in accordance with the UNI EN ISO 14021 standard.

This makes **recycled plastic products more visible and easily identifiable**, targeting Public Administrations and/or publicly owned companies, as well as large-scale retailers and private consumers. For this reason, IPPR publishes and continuously updates the catalog of materials and products that bear the PSV certification.

ICSS holds certification for seven of its products intended for civil construction, ensuring that each contains at least 15% recycled content in its composition. Below is an image of one of our certified products.
